

MEET THE FISH OF POPES EYE

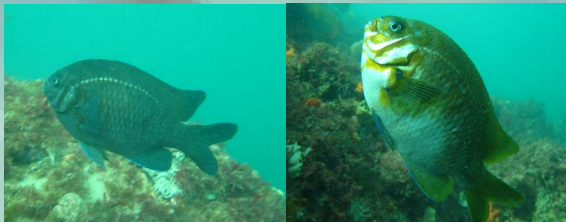

Great Victorian
FISH COUNT

The Nature Conservancy's Reef Cam gives us a window into one of Port Phillip's most iconic dive and snorkel sites- Popes Eye, in Port Phillip Heads Marine National Park. Here's a list of fish you're most likely to spy swimming past the Reef Cam- many of them are species that we survey during the Great Victorian Fish Count.

If you'd like to learn more about Reef Cam (including where to view the live stream), visit vnpa.org.au/programs/reefcam
